

THE FASTEST SECOND CHANNEL
TWO FACTOR AUTHENTICATION
IN THE WORLD

www.spriv.com

FAST AND AUTOMATED 2FA MEANS NEW CYBER-SECURITY CAPABILITIES

Everybody knows that two-factor authentication (2FA) is a proven method for preventing hackers from using stolen credentials. However, the requirement for an extra step by current 2FA platforms presents a challenge. This is Spriv's sweet spot: Spriv provides 2FA without the hassle of having to interact with a mobile phone every time the user logs in. **Just one click, and all following logins are authenticated automatically without user intervention.**

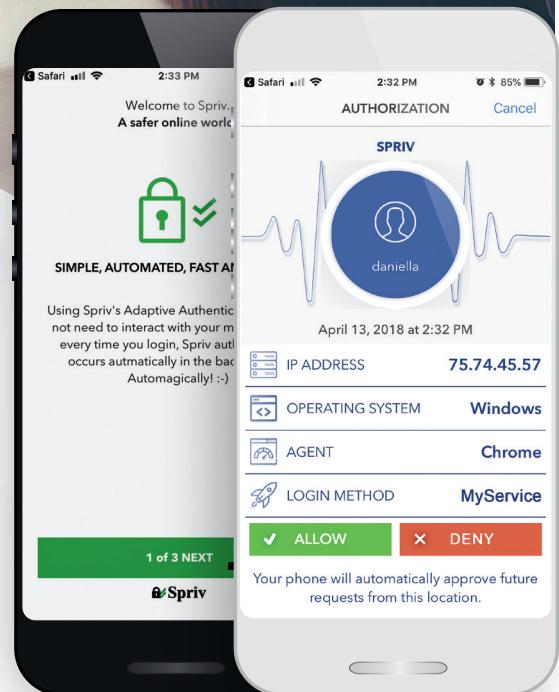

Competitive technologies such as NFC and Bluetooth have hardware limitations and cannot possibly provide second channel authentication to remote servers. **Spriv is the only technology that can be implemented on any Windows server or workstation while securing local and remote access.**

Spriv is the fastest 2FA second channel platform in the world: it takes approximately 1.5 seconds to automatically authenticate access; no other 2FA second channel platform comes even close.

For more information and videos about our Windows adaptive 2FA second channel platform go to:

Installing Spriv is a breeze:

The install process takes less than two minutes and doesn't require a reboot.

Innovation:

Spriv is the first company to successfully patent adaptive 2FA and to provide Windows-based adaptive authentication. Spriv's innovative cutting edge technology includes several granted patents as well as additional patents pending at the US Patent Office.
